CGI becomes first official reseller for PMW

systemizeit **CGI** **pmw**

We start the year with CGI becoming a PMW reseller

'CGI is among the leading independent information technology and business process services firms in the world.'

We are excited that CGI has selected SystemizeIT's PMW to enhance its Product Lifecycle Management support to the insurance community.
CGI operates in 40 countries and has over 3,500 insurance experts worldwide. With $10.3 billion in annual revenue, it counts 12 of the top 20 global insurers as clients. Over the last 10 years, CGI have achieved a client satisfaction score of 9/10, and we are proud to be associated with such a client-focused business.

In addition to extending its own insurance solution offerings, CGI's system integration, and multi-vendor expertise, positions it to integrate PMW with other third party policy administration solutions.

As well as PMW licensing, CGI will provide localised end-user support, tool training/mentoring and management consulting services for enhancing the product life cycle process within the insurance community.

CGI commented;
"We are pleased to be working with SystemizeIT and its industry-leading Product Management Workbench (PMW)," said Billy McCarter, Vice President of CGI's Insurance Solutions Group. We noticed a gap in the marketplace for tools and definitions for insurance products that could be integrated with applications, like Ratabase®, and also could be leveraged by our clients to reduce time to market and compliance risk concerns for regulatory filings. PMW is a great tool to manage the hectic pace of change that carriers are feeling today to release new products (and update existing products) to meet policyholder needs."

Send enquires to insurance@cgi.com for more information on the services provided.

The Business   IT Department

Systemize continues with its goal to provide a 'best of breed' product management environment for insurance professionals with support for multiple, downstream, policy administration solutions.
